

CLUSTER CARE LIKE YOU'VE NEVER SEEN IT BEFORE

Ambu® aScope™ 5 Broncho HD & aScope™ Gastro

Ambu

The Ambu® aScope™ 5 Broncho HD System and aScope™ Gastro triumph in the trauma center. That's because Ambu's fifth-generation scope and new GI device offer a better way to do thoracic and trauma surgery by providing:

- Smooth workflow
- Easy device passage that withstands heat and cold
- A brand-new scope every time
- Clear, crisp images
- Adaptive light control
- True colors
- A live endoscopic HD image on the built-in touchscreen within seconds of connecting to aBox™ 2

Welcome to Single-Use Simplicity

Here's What You Can Count On:

- Exceptional imaging
- Excellent maneuverability
- Smart, functional design
- Consistent quality

aScope 5 and aScope Gastro Are Here For Cluster Care

Cluster care is ideal when it comes to managing percutaneous tracheostomy and percutaneous endoscopic gastrostomy (PEG)-tube replacement in trauma care. The Ambu® aScope™ 5 Broncho, Ambu® aScope™ Gastro, and aBox 2 HD System make cluster care smooth and efficient. The best time to perform a PEG-tube placement is immediately before or after percutaneous tracheostomy – to minimize patient transfer, limit contact, and save PPE. A PEG-tube feeding with aScope Gastro can start four hours after tracheostomy or PEG placements. The sooner these can be done, the easier to stabilize your patient. With aScope 5, there's no worry about scope damage from needles, or about leak testing. Ambu's aScope 5 Broncho helps avoid cancellations, smooths out workflow, and guarantees sterility. With the single-use aScope Gastro, there's no deterioration, so you can count on consistent quality, feel and performance every time.

Count on Ambu

The aScope 5's bending angles, distal tip angulation, and flexibility offer easy access to difficult-to-reach areas in the bronchial tree. Advanced processing ensures continuous image optimization. The 120° field-of-view and 3-100 mm depth-of-field HD system, with adaptive auto control, give a high-quality picture. Ambu's therapeutic (5.6/2.8) and diagnostic (5.0/2.2) scopes can be used with argon plasma coagulation and cryotherapy tools. Whether you are using biopsy forceps, cytology brushes, biopsy needles, cryoprobes, or other tools, Ambu can help.

The aScope Gastro provides a 140° field-of-view, with a 2.8 mm inner diameter in the working channel. Did we mention both provide a brand-new scope every time?

At Ambu, We Focus on Patient and Clinician Safety

That's why we designed the Ambu aScope Gastro and the Ambu aScope 5 Broncho for high performance, with all the hallmark benefits of our single-use solutions. They're always ready when you are. Our platform is simple – plug and play. That means more time for your patients. Ambu's single-use endoscopes are portable, intuitive, and lightweight – for smooth, easy navigation.

When Seconds Count

We know the work life of trauma and thoracic surgeons is fast-paced, so we understand you need endoscopes that can keep up. You don't have time to track down reusable devices and wait for them to be cleaned. With Ambu, you get a brand-new broncho and gastroscope for every patient – sterile straight from the pack. So, there's no worry about cross-contamination, or transporting, cleaning, locating, or storing equipment. Our single-use, fully-integrated solution is easy to set up, has a small footprint and requires zero handling or reprocessing after use. It streamlines workflow at the same time that it improves patient and clinician safety.

ORDERING SPECIFICATIONS

Item No.	Description
483001000US	Ambu® aScope™ Gastro
505001000US2	Ambu® aBox™ 2 v2
