

## DATASHEET

Ambu® Baby is a lifelike manikin that simulates babies up to age 1.

With the new iQF (Integrated Quality Feedback) App, you can provide training with a high level of precision for infants in cardiac arrest.

### CPR Training with Infants is Very Important

Brain damage can occur if no action is taken within four minutes without oxygen.

### iQF, Training That Works for Life

The iQF application includes data-driven information and accurate measurements of relevant CPR parameters. Help your students perform perfect CPR while enjoying games and competing with each other.

Ambu iQF Instructor

### Realistic Ventilation and Ambu Hygienic System

Students will feel how a realistic airway opens when the head is properly moved into the sniff position. The instructor can simulate airway obstruction via an on/off switch. The Ambu Baby has additional features such as a realistic brachial pulse to provide precise training. In addition, stomach ventilation can be checked visually. Furthermore, the unique hygienic system prevents cross-contamination. Additionally, the correct compression depth, rate and required ventilation volume can be monitored by the feedback indicator on the manikin.

# Ambu® Baby iQF

## KEY BENEFITS

The ventilation can be seen and the exhalation through the nose can be seen and heard

Head mobility and extension ensure precise positioning and airway clearance

Ambu hygienic system eliminates the risk of cross-contamination

Airway obstruction can be turned on via a switch

The realistic brachial pulse allows precise and complete training

## TRAIN IQF, TRAIN FOR LIFE

Visualize in detail the compression depth, rate, and ventilation volume at your fingertips with the Instructor and Trainee iQF Apps. Connected by Bluetooth®.
