# Improving patient safety with innovative visualization

Ambu® aScope™ 3 and VivaSight™

Visualization during One Lung Ventilation increases patient safety

Proper placement and positioning of a double lumen tube (DLT) or a bronchial blocker (BB) may be challenging. Initial malposition or subsequent dislodgment of the tube is not uncommon. Visual confirmation of correct position is recommended as good clinical practice.

The Ambu portfolio for One Lung Ventilation (OLV) offers a solution to this problem. The devices provide visual control during placement as well as continuous visualization during the entire OLV procedure.

It is about flexibility to choose the right visualization solution, and ultimately it is about improving patient safety.

VivaSight-DL

aScope 3 Slim 3.8/1.2

VivaSight-SL

VivaSight - Continuous visualization for faster and safer One Lung Ventilation
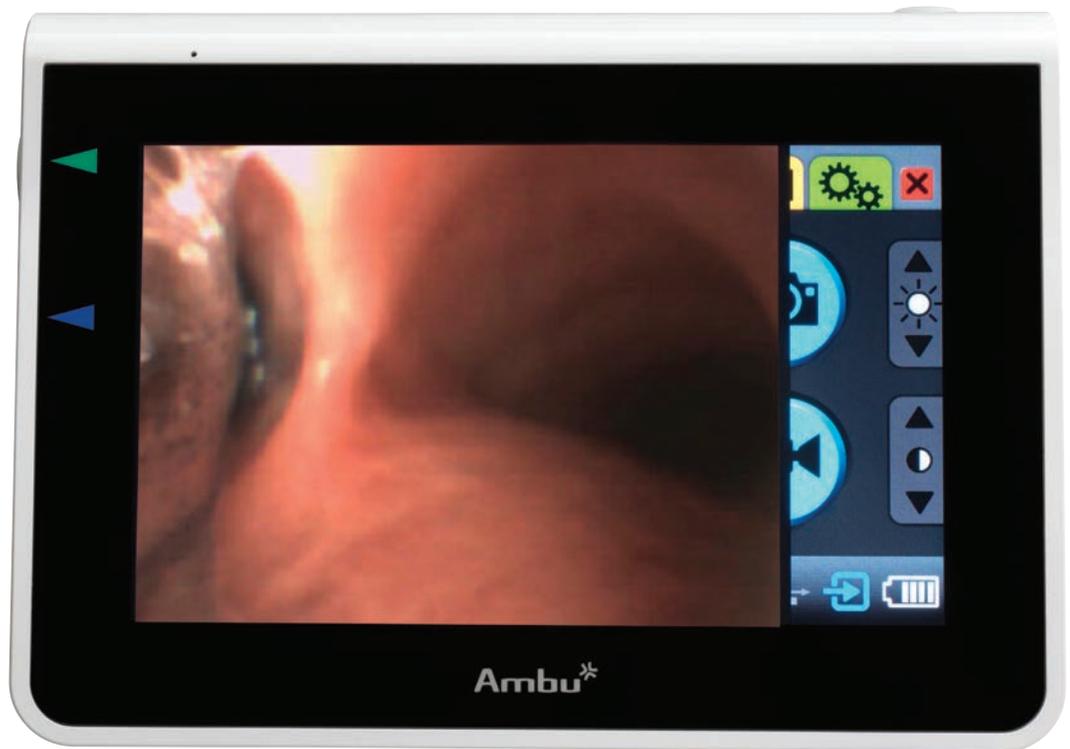

The VivaSight-DL with integrated high-resolution camera makes placement of the DLT fast and effective. The continuous visual monitoring throughout the procedure provides a clinical benefit and increases patient safety. VivaSight-DL can be used for left and right thoracic surgical procedures exactly like any other left sided DLT

Malpositioning and dislocation can be immediately detected and corrected with the real-time video image transmitted to the Ambu® aView™ monitor.

The VivaSight portfolio also includes VivaSight-SL, a single lumen tube with integrated camera for use with the Fuji Uniblocker and other endobronchial blockers.

High Quality view
aScope 3 and VivaSight connect to the Ambu® aView™, our portable, high-resolution monitor that is operational in seconds and intuitive to use.
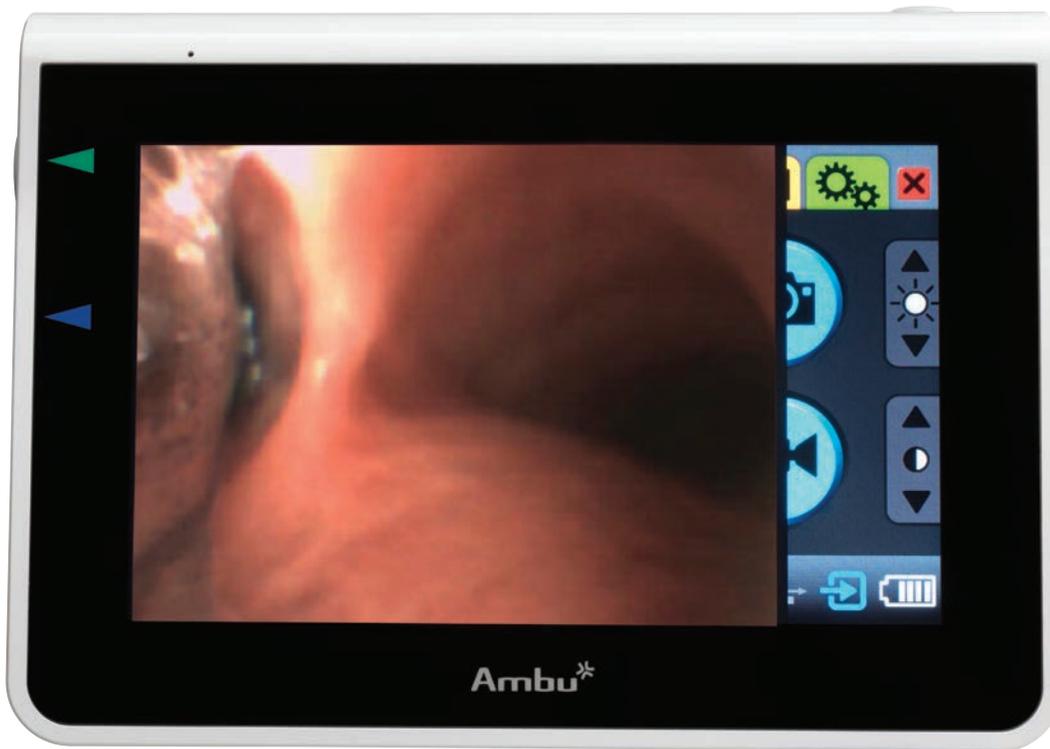

aScope 3 simplifies intubation and improves patient safety

The sterile, single-use and ready-to-go aScope 3 Slim bronchoscope simplifies bronchoscopy during placement and monitoring of DLT and BB positioning. It is ideal whenever bronchoscopic guidance is needed as part of OLV procedures.

The aScope 3 Slim system is portable, intuitive and fast to set up. After use there is no further handling or reprocessing; simply discard the scope. The single-use aScope 3 Slim helps you work smarter by eliminating costs and time consuming steps required to use, maintain and handle a reusable scope.

Visualization to the next level

Combining the convenience of single-use devices with high quality image and ease of use, aScope 3 and VivaSight are a completely new generation of innovative and complementary visualization devices.

Six good reasons to use the Ambu portfolio for One Lung Ventilation

It provides real time visual monitoring during placement and throughout the entire OLV procedure.

It makes lung isolation fast and effective.

It helps overcome today's placement and positioning challenges of OLV.

It provides reassurance and confidence for the anesthesiologist.

It provides a clinical benefit and improved patient safety.

STERILE All products are single-use and sterile with no risk of cross-contamination.

Reference number	Description	Size	Units/box
aScope 3
