AMBU ELECTRODES – QUALITY IN EVERY ASPECT

Highly refined manufacturing processes and quality controls ensure the Ambu electrode quality.

Pioneering and innovating for more than 4 decades

Through more than 40 years of experience with developing and optimizing ECG electrodes, Ambu has become a trusted partner for numerous hospitals, clinics and EMS service providers. We sell more than 800 million electrodes worldwide every year, and we strive to be the epitome of reliability and convenience in every situation.

Since our engineers developed the offset connector more than four decades ago, we have been continuously optimizing our products with unique features based on insights gained through close collaboration with users from all over the world.

A comprehensive range of electrodes

Electrodes need to be easy to use without extensive preparation. They must be equipped with features that ensure patient comfort and ease of use without compromising reliability and signal quality.

Over time, we have gained invaluable experience and understanding, enabling us to create a comprehensive range of electrodes.

Ambu Engineer Jan Rasmussen developed the offset connector more than 40 years ago - its technical advantages are still superior.

Ambu BlueSensor proudly sponsors the Xtreme Everest project, a research mission to find the underlying physiological reasons why some people cope better with low oxygen conditions than others.

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

BlueSensor

Ambu has more than 40 years of experience developing single-use electrodes. In 1976, the first Ambu® BlueSensor™ electrode came on the market. Today, BlueSensor offers a wide range of electrodes for various diagnosis and monitoring procedures.

Most BlueSensor electrodes feature offset design an innovation of Ambu, where the connector is strategically placed away from the sensor area. For electrodes with an onset connector, where all electrical components are stacked in the center, the sensor is subjected to both push and pull forces represented by taps on the connector and lead wire pulling, respectively. Offset connector mitigates the impact on signal quality from external forces. Moreover, an offset connector allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin. In situations where high quality signal is a must, an electrode with offset design is highly recommended.

WhiteSensor

Ambu WhiteSensor electrodes is a broad range of standard electrodes that cover basic needs within ECG.

The electrodes come with different sizes, shapes, gel types and backing materials to meet different needs.

GEL TYPE

Wet gel

Solid gel

BACKING MATERIALS

Cloth backing

Foam backing

Polymer backing

Microporous backing

FEATURES

Double ring adhesive

Silver sensor

Radiolucent

MR Conditional

BENEFITS

Occlusive backing

Breathable backing

Ambu is constantly working to improve user experience and convenience. We have added icons to the packaging for quick guidance and simple selection - making your everyday easier.

BlueSensor KEY FEATURES

OFFSET CONNECTOR

- Mitigates the impact on signal quality from external forces like pulling of lead wires and pressure on electrodes.
- Allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin.

DOUBLE RING ADHESIVE*

- Secures fixture for long-term application and a stable signal throughout the monitoring period.
- The outer ring is for long-term wear, as adhesion increases with time.
- The inner ring on the polymer material “seals” the gel area and ensures a fast adhesion.

WET GEL

- Is highly conductive.
- Optimizes contact between skin and electrode.
- Lowers skin impedance effectively and immediately.

AG/AGCL SENSOR

- Is currently (as of March 2024) the gold standard biosensor material for surface electrodes.
- Ensures stable trace quality due to optimized conversion of the signal from biological to electrical.

Use these features effectively.
Scan to see an application video
of the BlueSensor

*Only applicable to long-term electrodes

RESTING ECG/12-LEAD ECG

Ambu offers a broad range of electrodes for ECG resting procedures to meet various hospital needs.

BENEFITS:

- **Stable trace quality**
- **Suitable adhesion**
- **No need for adaptors**

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

FEATURES AND BENEFITS:

- Conductive wet gel lowers skin impedance effectively and immediately
- Wet gel optimizes contact between skin and electrode
- Offset connector mitigates the impact on signal quality from external forces like the pulling of lead wires and pressure on electrodes
- Offset connector allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin
- Occlusive backing material is resistant to fluids
- Ag/AgCl sensor ensures stable signal quality
- The tab version is radiolucent and MR Conditional

BlueSensor SU-00-A

BlueSensor SU-00-C

BlueSensor SU-00-A

Size: 49 x 33 mm

Electrode
Manufacturing

HOLTER, EVENT RECORDING AND LONG-TERM MONITORING

BENEFITS:

- **Stable trace quality**
- **Suitable adhesion**
- **No need for adaptors**

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

FEATURES AND BENEFITS:

- Conductive wet gel lowers skin impedance effectively and immediately
- Wet gel optimizes contact between skin and electrode
- Combination of fast and long-term adhesives secures fixation and a stable signal
- Thin microporous backing material allows the skin to breathe
- Offset connector mitigates the impact on signal quality from external forces like the pulling of lead wires and pressure on electrodes
- Offset connector allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin
- Ag/AgCl sensor ensures stable signal quality

STRESS TEST

BENEFITS:

- **Stable trace quality**
- **Suitable adhesion**

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

FEATURES AND BENEFITS:

- Conductive wet gel lowers skin impedance effectively and immediately
- Wet gel optimizes contact between skin and electrode
- Adhesive is gentle to the skin
- Offset connector mitigates the impact on signal quality from external forces like the pulling of lead wires and pressure on electrodes
- Offset connector allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin
- Ag/AgCl sensor ensures stable signal quality

SHORT-TERM MONITORING

BENEFITS:

- **Stable signal quality**
- **Suitable adhesion**
- **Fast and easy to use**

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

FEATURES AND BENEFITS:

- Conductive wet gel lowers skin impedance effectively and immediately
- Wet gel optimizes contact between skin and electrode
- Adhesive is suitable for short-term application
- Occlusive backing material is resistant to fluids
- Offset connector mitigates the impact on signal quality from external forces like the pulling of lead wires and pressure on electrodes
- Offset connector allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin
- Ag/AgCl sensor ensures stable signal quality

PEDIATRIC/NEONATAL MONITORING

BENEFITS:

- **Stable trace quality**
- **Suitable adhesion**

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

FEATURES AND BENEFITS:

- Skin-friendly solid gel supports the quality of the signal
- Soft cloth backing material allows the skin to breathe
- Extra small sizes fits neonatals
- Radiolucency allows the electrode to remain on the patient during X-ray procedures
- Wired with 1.5 mm or connector

BlueSensor BR, BRS

ACCESSORIES

FEATURES AND BENEFITS:

- Secures electrode leadwires on patients during Holter and Stress test
- Reduces movement artifacts on the ECG
- Minimizes the risk of electrodes falling off
- MR Safe
- Adhesive size: 55 mm
- Latex free
- Biocompatible

The correct placement of electrodes is typically determined by the hospital/physician and/or local protocol/procedures. Images in this catalogue are not meant as placement guidance.

A HISTORY OF BREAKTHROUGH IDEAS

Ambu has been bringing the solutions of the future to life since 1937. Today, millions of patients and healthcare professionals worldwide depend on the efficiency, safety and performance of our single-use endoscopy, anaesthesia, and patient monitoring solutions.

The manifestations of our efforts have ranged from early innovations like the Ambu® Bag™ resuscitator and the Ambu BlueSensor electrodes to our newest landmark solutions like the Ambu aScope - the world's first single-use flexible endoscope. Moreover, we continuously look to the future with a commitment to deliver innovative quality products that have a positive impact on your work.

Headquartered near Copenhagen in Denmark, Ambu employs approximately 4,500 people in Europe, North America and the Asia Pacific.

Ambu takes environmental issues seriously

Some of the greenest companies in the world are based in Denmark, and Ambu is inspired by this tradition.

Ambu environmental targets by 2025: All packaging will be recyclable, reusable or compostable; 50% reduction of carbon emissions compared to 2019 baseline; 95% PVC-free for products released after 2025.
