

# NO HALF MEASURES WITH SINGLE-USE CYSTOSCOPY

Ambu offers an entirely single-use, flexible video cystoscope that is ready when needed, improves workflows for staff, is sterile with no reusable components, and reduces the need for capital, reprocessing, or repair expenses.

Size 16.2 Fr/5.4 mm

Single-use flexible cystoscope

## Ambu's Urology Solutions

The aScope 4 Cysto is an innovative solution for urology practitioners from outpatient clinics to 24/7 inpatient consult needs. It is completely sterile out of the package and features plug-and-play simplicity with the Ambu® aView™ 2 Advance portable high-definition display. No handles or reusable components to clean, disinfect, or sterilize. Nothing to repair. Nothing to replace.

# Ambu

## Ambu® aScope™ 4 Cysto vs. Hybrid Cystoscopes

Ambu provides an entirely single-use device compared with some systems that feature reusable scopes with disposable components.

### Ambu aScope 4 Cysto

#### Performance of Single-Use

- Brand-new performance quality for every patient
- Plug and play - ready for use in seconds
- Image quality brand new each time
- High-definition display for mounting on IV pole, cart, or hand-transport for easy movement

#### No Reprocessing Required

- Completely sterile from package
- No wipe down, disinfecting, or leak testing required
- No staff time required before and after procedure
- No chemicals or PPE needed for reprocessing

#### Transparent Cost of Care

- No reusable scope component purchase required
- No ad-hoc repairs, no binding service agreements, no loaner systems needed
- Add cystoscopy to multiple concurrent procedure rooms without big capital spend
- No staff expense for between-procedure management

### Hybrid Cystoscopes

#### Performance of Hybrid

- Poor setup leads to inconsistent performance
- Disposable components can impact image quality
- Reusable components wear and tear over time

#### Some Reprocessing Required

- Reusable components still require disinfection or sterilization
- Reusable components may still need leak testing and full immersion
- Chemicals may degrade reusable equipment over time leading to repairs
- Still requires time and staff to manage between procedures

#### Hidden and Additive Cost of Care

- Reusable scope components still require purchase
- Repairs, service agreements, and replacements still required
- Staff time for reprocessing still required
- May require leak testers, chemicals, and reprocessing capital and ongoing expenses
